

Full Stack Engineer

About Nua

Nua is a venture-funded, direct-to-consumer (D2C) brand transforming women's wellness in India. Starting with our innovative, chemical-free and India's only fully customisable sanitary pads, we are on a mission to develop holistic and personalized solutions for solving real problems that women face. We do this by building a wellness platform with great products, an impactful community and a personalized customer experience. With a growing community of over 15 lakh women, we are already India's largest and most engaged digital-first FemTech brand.

Our story began with a pad. And not just any pad that could be picked off the shelves but one that was truly thought around a woman's needs. Since then, we have grown multi-fold with innovative, inclusive and effective products that are Made Safe certified and backed by science. We continue to co-create products with our community and fuel the D2C revolution through deep consumer insights and investments in technology.

Nua has raised over \$22 million in venture funding, backed by marquee investors including Lightbox Ventures, Kae Capital, Mirabilis Investment Trust, Deepika Padukone and Vindi Singh Banga, and Kamini Banga of the Banga family office. If you are as passionate as we are in making a difference and creating real impact in a fast-paced and wildly creative environment, then you might just be the person we are looking for.

About the Role

Nua's storefront team is looking for a front-end developer. You will work on building next-gen web applications using VueJS/ReactJS and a wide array of front-end technologies. The UI layers have to be highly responsive, beautiful, performant and work for consumer sites and mobile apps. You will be working closely with the Product, and QA team to build and launch the product.

Key Responsibilities:

- Nua's engineering team is looking for a full-stack developer.
- Contribute to all parts of software development and deployment, including design, development, documentation, testing and monitoring.
- Build highly responsive, beautiful, performant features for consumer sites and web apps.
- Collaborate with other engineers, product managers, and QA teams to build, launch and maintain new features, processes, and integrations of the product.

Job Requirements:

- 1+ years of experience in building highly scalable and performant UI on the Web/Mobile
- Skilled at front-end engineering using JavaScript, its various libraries and micro frameworks (Vue/ React)
- Solid understanding of HTML5, CSS3, and JavaScript.
- Knowledge of backend languages PHP/ GoLang/NodeJS.
- Familiarity with databases (e.g. MySQL, MongoDB), web servers and UI/UX design
- Experience with RESTful APIs and asynchronous request handling.
- Strong problem-solving skills and attention to detail.
- Well-versed in software engineering principles, frameworks and technologies.
- Bachelor's / Master's Degree in Computer Science or Engineering, or related Field

Preferred skills

- Working knowledge of AWS/ GCP/ Azure is a plus.
- Proven experience as a full-stack developer or a similar role.
- Excellent communication and collaborative skills.
- Self-directed team player who thrives in a fast-paced, dynamic environment.
